

Indoor air quality (IAQ) testing can help you be proactive about creating a healthy indoor environment for building occupants, patients, and guests. Testing can identify minor problems and help document your company's standard procedures for creating a healthy building. [Testing services](#) provide a report with the air content and whether particles and gases are in acceptable ranges. Handheld testers are also available for routine testing by building staff. To earn these points:

- Obtain or conduct initial IAQ testing for areas under management control at minimum. Testing must have occurred no longer than one year prior to date of CSP application.
- You may claim these points if your company conducts regular testing (annual at minimum).

1. When did you obtain IAQ testing?

2. Did you use a service provider, or did building staff use their own equipment? Explain your approach if necessary.

3. Were you able to identify and remediate any IAQ issues through the testing?

Yes, we found some issues to fix.	
No, our IAQ was acceptable.	

Alternative Documentation

Instead of this form, you may submit at least one of the following to IREM®:

- Summary of test results (can be redacted)
- Invoice from testing contractor
- Paragraph summarizing testing equipment and schedule if performed in-house
